Ques.1 What are the two qualities of the mind present in the poem?
Ans: - The two qualities of the mind present in the poem are fearlessness in thought and fearlessness in action.

Ques.2 What is meant by the expression 'Knowledge is free'?
Ans: - The expression "Knowledge is free" means that every individual is free to acquire as much knowledge as he likes. Knowledge is not subject to any sort of bondage.

Ques.3 What did Gandhi exhort people to do when he addressed them on the way of Dandi?
Ans: - While addressing people on his way to Dandi, Gandhi exhorted them to wear Khadi, ~~abjure~~ (give up) alcohol and drugs, abandon child marriage, keep clean, live purely and when the signal came break the salt laws.

Ques.4 What required imagination, dignity and the sense of showmanship of a great artist?
Ans: - To walk for twenty four days and rivet the attention of all India, to tick across a countryside saying, "Watch, I am about to demand".

If a planet were suddenly stopped in its orbit, suppose circular. Show that it would fall into the sun in a time $\frac{1}{2}$ times the period of planet's revolution.

Let 'a' be the radius of path.

The particle be suddenly stopped at point P.

Its velocity suddenly reduces at zero.

Then, the planet will begin to move in the straight line PS towards S, under the acceleration $\frac{4}{(distance)^3}$.

Now, eqⁿ of motion of the particle while falling from P to S is

$\ddot{s} = -\frac{4}{s^3}$ } -ve sign is positive since 's' is decreasing }

$v \frac{dv}{ds} = \frac{4}{s^3}$

$\int \infty v dv = -\frac{4}{s^2} du$

On integrating, we get

INTRODUCTION

GST is the type of indirect tax in India and it charge for supply of goods , services, consumption of goods and sales of goods . It is a wide-ranging , multistage, goal based tax. Wide -ranging: because it combines the all other indirect taxes. Multistage: because it charge at every level in the production process. Goal based tax : because it charge from a point of consumption not like previous taxes when indirect taxes charged tax on tax . Before GST in India we paid the value added tax and many other indirect taxes. Vat was abolished and GST brought to India . VAT was utilization charge put on an item at whatever point esteems are included at each phase of gracefully chain ,from creation to the retail location and cost . But in other hand we have GST , GST is very easily and effective as compared to vat & GST is also finished and eliminate the cascading effect. GST has replaced multiple indirect taxes, which were existing under the previous tax regime. The advantage of having one single tax means every state follows the same rate for a particular product or service. Tax administration is easier with the Central Government deciding the rates and policies. Common laws can be introduced, such as e-way bills for goods transport and e-invoicing for transaction reporting. Tax compliance is also better as taxpayers are not bogged down with multiple return forms and deadlines. Overall, it's a unified system of indirect tax compliance.

DETAILS OF VARIOUS COMMITTEES AND COUNCIL

गुरुकुल महिला महाविद्यालय

छत्तीसगढ़ शासन तथा पंडित रविशंकर शुक्ल विश्वविद्यालय रावपुर से संबंध
गुरुकुल परिसर, कालीबाड़ी रोड, रावपुर (छ.ग.) ई-मेल : info@gurukulraipur.com

फोन : 0771-4053443

फैक्स : 0771-4036032

संचालित भातखण्डे ललितकला शिक्षा समिति, गांधी चौक, रावपुर (छत्तीसगढ़) पंजीवन क्रं. 16/51-52

COMMITTEES 2022-23

1. Admission Committee

S.No.	Members	Designations	Designations	Sign
1.	Dr. Rajesh Agrawal	In-charge	HOD Commerce	<i>Rajesh</i>
2.	Dr. Vandana Agrawal	In-charge	HOD Science	<i>Vandana</i>
3.	Dr. Amita Telang	In-charge	HOD Computer	<i>Amita</i>
4.	Dr. Rinku Tiwari	In-charge	Sports Officer	<i>Rinku</i>

2. Student Union Committee

S.No.	Name	Designations	Post	Sign
1.	Kavita Siliwal	In-charge	Astt. Professor, Commerce	<i>Kavita</i>
2.	Dr. Anuradha Gupta	Member	Astt. Professor, Physics	<i>Anuradha</i>
3.	Mrs. Rukmani Digraskar	Member	Astt. Professor, Computer	<i>Rukmani</i>
4.	Mrs. Teenu Dubey	Member	Astt. Professor, Maths	<i>Teenu</i>

3. NSS Committee

S.No.	Members	Designations	Post	Sign
1.	Mrs. Ratri Lahari	In-charge	Astt. Professor, Commerce	<i>Ratri</i>
2.	Anjali Dewangan	Member	Astt. Professor, Maths	<i>Anjali</i>
3.	Miss Anshika Dubey	Member	Astt. Professor, Computer	<i>Anshika</i>
4.	Devshree Verma	Member	Astt. Professor, Zoology	<i>Devshree</i>

4. Cultural Committee

S.No.	Members	Designations	Post	Sign
1.	Dr. Seema Chandrakar	In-Charge	Astt. Professor, Hindi	<i>Seema</i>
2.	Dr. Deepshikha Sharma	Member	Astt. Professor, Computer	<i>Deepshikha</i>
3.	Mrs. Teenu Dubey	Member	Astt. Professor, Maths	<i>Teenu</i>
4.	Manya Sharma	Member	Astt. Professor, Commerce	<i>Manya</i>

5. Training & Placement Committee

S.No.	Members	Designations	Post	Sign
1.	Dr. Megha Agrawal	In-Charge	Astt. Professor, Botany	<i>Megha</i>
2.	Dr. Deepshikha Sharma	Member	Astt. Professor, Computer	<i>Deepshikha</i>
3.	Dr. Simran R. Verma	Member	Astt. Professor, English	<i>Simran</i>
4.	Miss Poonam Katankar	Member	Astt. Professor, Computer	<i>Poonam</i>

TYPES OF COMPUTERS

Everyone uses computers every day be it for work or personal use. But what we don't realize is that we use a different type of computer for different uses.

A doctor at the hospital will be using a mainframe computer while a graphic designer at her office will be using a workstation. Depending on the type of computer, our use changes.

Types of Computers – Based on Purpose

On the basis of purpose, there are just two variety of computers. Those two varieties have been discussed in detail below:

Types of Computer-Based on Purpose

- General Purpose Computer
- Special Purpose Computer

General Purpose Computer

A general-purpose computer system is one that can be programmed to perform a wide range of functions. Users or devices can interact with general-purpose computers in a number of ways to suit a wide range of requirements.

A general-purpose system's capacity to run a variety of applications allows it to be highly adaptable in terms of the jobs it can complete. Software may be readily installed, updated, and removed, altering the system's functioning.

Writing a word processing letter, document preparation, recording, financial analysis, printing papers, constructing databases, and computations are all activities that general computers can perform with precision and consistency.

These computers are often smaller, have less storage space, and are less expensive. The capacity of these computers to execute specific tasks is restricted. Nonetheless, it is adaptable and effective for meeting people's fundamental requirements at home or in the office.

A general-purpose system often has a large number of inputs and outputs to which it may be attached. For example, having USB ports on a laptop allows other devices to alter the laptop's capabilities and features.

Because general-purpose systems are meant to handle a wide range of processes, they aren't always entirely optimised for each activity. Optimization is crucial for some activities!

Computers in general are meant to do a variety of activities such as: – Document preparation

- Financial evaluation
- Document printing
- Input/Output functions at a basic level
- Database creation
- Smaller-scale data storage
- Consistent and accurate calculations.
- Performing arts in general

Special purpose computer

These computers are made to carry out a specific or specialised activity. The scope and scale of the job depends on the size, storage capacity, and cost of such computers. The purpose of these computers is to do a certain task.

To function effectively, the unique computer requires certain input and output devices, as well as a motherboard that is compatible with the CPU.

Weather prediction, planetary science, farming, engineering, meteorology, satellite operation, traffic control, and pharmaceutical science research all utilize these computers. These computers' functions are consistent with any certain purpose, i.e., they are meant to do a specific or specialised activity.

- Thermometers to evaluate temperature are one example of these sorts.
- Instruments for studying climate change
- Generators for power management
- Computers with a lot of memory for IT firms

- External factors like noise and weather don't impact the device making the reproducibility of results is higher.

3. Hybrid Computer

Combining the features of both analog and digital computers, the hybrid computer was invented. It has the speed of an analog while the memory of a digital device. It is capable of using continuous and discrete data and is mostly used in specialized applications. Eg – petrol pumps, airplanes, hospitals, and scientific applications.

Characteristics of Hybrid Computers:

- It has a very high speed as the configuration goes on parallel.
- It delivers precise and faster results that are useful.
- This is capable of solving difficult equations in real-time.
- It helps to maintain on-line data processing.

Types of Computers based on size

1. Supercomputer

The largest and fastest computers are the supercomputers specifically designed to process huge amounts of data. It is capable of processing trillions of instructions in a few seconds as it has thousands of processors interconnected.

Roger Cray developed the first supercomputer in 1976 and since then it is only used for particular science and engineering applications. This includes weather forecasts, hospital equipment, nuclear research, etc.

Characteristics / Applications of supercomputers:

- It enhances device protection as it can decrypt the passwords for security reasons.
- Animation results are excellent on this computer.
- Nuclear weapons and critical medical tests use them for virtual testing.
- The National Oceanic and Atmospheric Administration uses it for climate patterns and weather conditions.
- Designs flight simulators for beginner pilots for training.
- Extracts information from data storage centers for useful purposes.
- Online currency like bitcoin and stocks are largely managed by this computer only.
- Diagnosis of some critical health issues like brain injuries and strokes is done by this computer.
- It accurately analyses scientific data and explores the solar system and earth movement.
- It can identify the level of pollutants present in the atmosphere at a particular point in time.

2. Mainframe computer

These are specifically designed computers for big organizations as they allow hundreds and thousands of users to use programs simultaneously. Industries like banking, telecom, with a need to process high volume data, use mainframe computers.

Characteristics of Mainframe Computers:

- It is capable of processing huge amounts of data in seconds.
- It is very durable and can last for 50 years at least with proper installation.
- This can handle large-scale memory management.
- It can distribute the work internally among other processors.
- Very few chances of error and even in the case of one, there is a quick fix.
- The technology inside protects data while exchanging information.

Applications of mainframe computers:

- Allows medical firms to maintain and track records of millions of patients relating to medicines, appointments, and updates.
- In defense security, one branch can exchange large and sensitive information with another branch.
- Allows universities and academies to maintain data of their students, teachers, other subgroups, etc. They can manage, change and retrieve according to their convenience.

- Similarly, the retail sector also needs these computers to maintain a database of their large customer group distributed across the city and sometimes countries.

3. Minicomputer

It is a computer with a medium size that comes with two processors and can support 200 users at a time. They are commonly used in institutes and departments for accounting-related tasks. This computer comes between the mainframe and microcomputer in terms of size.

Characteristics of minicomputer:

- It is very easy to carry due to its lightweight and can fit in a small space too.
- It is cheaper than the mainframe computers.
- Even with a small size, it is quite fast.
- It has a good battery life and stays charged longer.
- It can work without a controlled operational environment.

Applications of minicomputers:

- The manufacturing firms use it for process control. It collects data and gives back feedback and fixes any abnormality instantly.
- Small organizations like local hospitals and hotels use it to store and share data related to their customers/ patients. Data management is the key function here.
- It is often used as a communicator in a large system as it becomes a portal between the operator and processor.

4. Workstation

It is a single-user computer designed mainly for technical and scientific applications. The microprocessor is very fast with a large RAM and high-speed adapters. It is known to perform a specific task only and thus the market offers variations like graphic workstations, music workstations, etc.

Characteristics of workstation computer:

- Designed for business and professional use, it is a single-user device with high performance.
- They are better than the personal computer with a powerful CPU, more storage, and better-looking graphics.
- Their application is endless as there is a computer available for every expertise field.
- It can multitask between audio, video, animation, editing, etc.

All workstation computer mandatorily needs to have these five features –

- Multiple Processor Cores
- Error-correcting code RAM
- Redundant Array of Independent Disks
- Solid State Drives – fewer chances of physical failure
- Optimized, Higher end GPU

5. Microcomputer

The smallest size computer invented solely for personal use is a microcomputer. The central processing unit is the processor, storage memory, and input/output unit. Personal laptops and PCs that we use today are examples of this type only. The application of these computers is for personal use only like office work, assignments, or watching a movie. The types of microcomputers are –

- Notebook computer** – lightweight computer like a briefcase. They have flat-panel technology and are very expensive compared to others. They come with a battery pack that needs to be recharged every few hours.
- Desktop Model** – A top of a desk computer with a monitor, they are broad and low with three internal mass storage devices. Also known as slimline models.
- Tower computer** – It has a power supply, motherboard, and mass storage connected in a compact box. The installation is easy to do and its compact nature makes it easier to fit anywhere.
- Laptop** – A small and portable computer that is easy to carry with a flap-like screen.

- Special-purpose computers are only a few examples.
- Automated teller machines (ATMs)
- Computerized traffic-control systems
- Surveillance apparatus
- Simulators for weather forecasting
- Laundry machines
- Computers controlled by military planes
- Applications for the defence sector
- Systems for oil exploration

Types of Computers – Based on Data Handling Capabilities

The computers are categorized into three types based on their data handling capabilities. They are –

1. Analog Computer

With a design to process analog data, the invention of analog computers took place. This type of data is continuous i.e. loops changing without having a discrete value. Thus these computers are only useful when the exact value is not important like in the case of speed, temperature, pressure, and current.

These computers can directly accept data from the devices without conversion into a numerical value. They continuously measure the changes in physical quantity and deliver the result on a dial or scale. Speedometer and mercury thermometer are examples of this type.

There are four main types of analog computers –

a. Slide Rules

The simplest type of analog computer developed for basic mathematical problems. It consists of two rods, the first rod has marks that slide to line up with another rod.

b. Differential Analysers

This is a special device used for differential calculations using a wheel and disk mechanisms.

c. Castle Clock

With an ability to save programming instructions, it could include the display of time, zodiac, and solar and lunar orbits.

d. Electronic Analog Computers

Here, the electrical signals flow in capacitors and resistors without mechanical interaction of components.

Characteristics of Analog Computers

- It is a real-time operating device that represents data at the same time continuously within the given range.
- Performs calculations without third-party support for input/output conversion to electronic form and vice versa.
- Allows users to scale down the problem helping them understand errors and effects of the problem.

2. Digital Computer

This type of computer is for calculating and performing logical operations at a very high speed. It accepts data in digits or binary numbers and works on them with programs delivering an output. All sorts of modern devices like laptops and smartphones fall under this category.

Characteristics of Digital Computers:

- The device can store a large amount of information with easy retrieval as well.
- Allows users to add the latest features to the system more easily.
- Without changing the hardware, many applications can be run on the same computer with different programs.
- Improvement in the integrated circuit technology led to falling hardware prices.
- Works at a high speed as it is digitally run.
- It uses error correction codes to become very reliable.

- **Subnotebook** – A portable computer with lighter weight and smaller keyboards. It is smaller than the notebook computer but the rest of the features remain the same.
- **Hand-held computer** – A portable computer which can be easily held in hand. Calendar and address books are the most common forms used in the market. These are pen-based devices and are often called pocket computers.
- **Palmtop** – A small computer that fits in your palm but comes without a disk drive. They are similar to PDAs only and are often referred to as one. They have PCMCIA which allows insertion of drives and other devices.
- **PDA** – commonly used for fax, phone calls, and network features. They come with a stylus and keyboard including writing recognition. They have limited applications because of their high price.

Characteristics of a basic microcomputer:

- The smallest size computer available.
- There is a limitation to installing software.
- A single person can only use it at a time.
- Super easy to use at a lower cost.
- No training is required to use the device.
- A single semiconductor chip comes with it.
- Only multitasking it can do is printing, browsing, watching videos, etc.

Dr. Amita Telang Lecture notes

HARDWARE

What are Hardware?

All physical parts, components or devices attached to a computer are called Hardwares. Hardwares are simply computer devices attached with computer to take input, to process, to store data and to present output in the user acceptable format. Most commonly used examples are Keyboard, Mouse, Monitor, Hard disk and speaker.

Basic List Computer Hardware Components and Their Functions: **Input Hardware Components of Computer**

- **Pointing Device:**

Pointing devices create the input interface, with the help of this interface user help to control and feed the instructions to the PC using physical moving hand held devices like as mouse and more. Control the all positions of pointer on the screen of monitor with using pointing devices. There are many **examples of input devices of computer** such as:

1. **Mouse**

With the help of **mouse of computer** can be control a cursor, and select all types of text, files, icon on your computer screen.

2. **Trackball**

In the **Trackball**, one small movable ball places on the surface, and using this ball can be moved any direction on the **computer screen**.

3. **Touchpad**

Touchpad is best alternative to mouse device. In which all input give to computer by touching to **touch pad**, mostly this component is embedded on the laptop.

4. **Pointing Stick**

Pointing stick device shapes same as pencil eraser that is placed between G,H and B key on the keyboard.

5. **Graphics Tablet**

Graphics tablet is also known as **drawing** tablet. The main purpose of this device is to draw any types of sketch on his surface with using digital pen.

6. **Touch screen**

In the touch screen, users can select any text, file, and file with own fingers, without any other components.

7. **Light Pen**

This shape like as pen, with using this input device to feed input directly by this pen on the **computer** screen with good accuracy.

8. **Stylus**

Stylus input device is look like as small type pen shaped, purpose of this component to give the input instructions to computer screen and graphich tablet.

9. **Motion sensor**

Motion sensors detect the motion input that are given by user without any other input device.

10. **Interactive smartboard**

This is special **digital smart white board**, user can control the computer with smart board, when write any thing on the surface with the help to stylus and digital pen.

11. **Fingerprint scanner**

This device use for authenticate the user when they press their finger on the surface of **fingerprint scanner**.

12. **Multi-touch screen**

With the use of this technology, multiple uses can send input at the same time.

Primary storage devices are designed for temporarily storage, but fastest to storage devices and small size as well.

Examples are:

1. RAM

RAM is volatile storage memory in which all data are gone while getting turn-off computer.

2. Cache Memory

Cache memory stores such data which use repeating frequently, so accessing speed of this memory is fastest to RAM.

Secondary Storage Devices:

Secondary storage devices used for the permanently storage of data, because if further time require any data then can be retrieved easily. The sizes of these components have large compare to **primary storage devices**, and storage capacity much high also.

Examples are:

- Floppy diskette
- Hard drive
- Magnetic strip
- SuperDisk
- Tape cassette
- Zip diskette
- Blu-ray disc
- CD-ROM disc
- CD-R and CD-RW disc.
- DVD-R, DVD+R, DVD-RW
- USB flash drive and jump dri
- CF (CompactFlash)
- Punch card
- M.2
- Memory card
- MMC
- NVMe
- SDHC Card
- SmartMedia Card
- Sony Memory Stick
- SD card
- SSD
- xD-Picture Card
- Cloud storage
- Network media
- OMR

Motherboard is heart of the computer, because all processor and other components are connected with the motherboard.

5. Network Card

Network card help to connect multiple computer and other devices of computer.

6. Sound Card

Execute the voice instructions and arise the output in the sound form.

7. Video Card

Use to process the all video instructions, and yield the good quality video.

Output Hardware Components of Computer

Output devices received the processed information form processing components, and finally produce them into various form such text, audio, and video. These output devices **might** be connected with computer via wireless or wired.

Function – Obtain all different types of data from various types of input devices such as keyboard can allows only alphanumeric information and tracking device feed spatial information, and convert all data into machine language like as 0, 1 form. Finally calculated data provide to computer memory.

There are many **Examples of Output Devices of a Computer** like are

1. Monitor

Monitors use for showing the output in the visual shape, which is soft form.

2. Printer

Monitors use for showing the output in the visual shape, which is soft form.

3. Projector

For projecting the computer screen data on the surface object such as wall or white board.

4. GPS

GPS device take the all information from **GPS controller** such as location and weather conditions, and releases the accurate output.

5. Braille Reader

These devices are designed for blind person, because Braille reader retrieves all output from computer which readable for blind people.

6. Plotter

This **computer hardware device** is used for producing the vector graphic output.

Memory/Storage Devices

The core task of the **memory is storage** and retrieval; this depend on the R/W operation of all types of memory.

Using **storage devices**, all data files and objects can be sorted, porting, and extracting. The information can be stored in temporarily and permanently. These devices are may be internal or external.

Function – The prime functions of memory and storage devices are storing all data in temporary and permanent nature. If we want to store data for long time then can be used the permanent storage devices such as hard disk etc. But some time computer store data in temporary nature for some time only for execution any task for some moments such as Ram etc.

There are two **types of storage devices** such as:

Primary Storage Devices:

- **Bluetooth Peripheral:**

- Some devices connect to computer with Bluetooth mean wireless technology.
- **Keyboard**
 - **Mouse**
 - **Headset**
 - **Gamepad**

- **Visual and Imaging Devices:**

Such components help to provide input to computer in the form of images and visual.
Some examples are:

1. Webcam

This device uses for capture the real time image, and it connects to computer.

2. Digital Camera

Digital camera is able to store all images and videos store in digital form (memory chip) instead film (reel).

3. Digital Camcorder

Digital camcorder devices are able to recording all video into real-motion.

4. Biometric Scanner

Biometric scanner devices are designed for security purpose, because these devices are capable to identify the persons.

5. Barcode Reader

Biometric scanner devices are designed for security purpose, because these devices are capable to identify the persons.

- **Network Devices:**

With the help of **network devices**, we can connect two or more computer, and other their hardware devices for making network.

These are

1. Ethernet hardware
2. Bluetooth/wireless hardware.

- **Processing Hardware Devices of Computer**

Processing is most important function of computer, because in this phase has been done transformation to data into useful information using with many computer processing **computer hardware devices**.

Function – The main function of **processing devices** are have to responsible for getting meaningful information from converted data with the help of various processing devices.

Processing device examples are:

1. Microprocessors

Microprocessor is logically integrated chip that is processed all logical instructions, and produce the output.

2. GPU

Graphics processing unit is also a processor that is designed for rendering the videos and images with good quality.

3 CPU

With the help of this **Central processing unit** can be executed all instruction such as logically, arithmetically, and I/O operation which are given by users.

4. Mother board

- **Game Controller**

These types of devices are designed for playing game with connect to a computer or other gaming system console. The main role of **game controller devices** is to all individual object, and character in your game.

Some examples are:

1. Game Pads

Game pad are designed for playing game, and can be handled by both hand.

2. Joystick

Mainly, joysticks devices are designed for playing game, using this device can be control any character in the game.

3. Steering Wheels

Look like as car steering, and use for changing the direction the any object in the game.

4. Paddle

This device move up and down direction, this input component is also useful to game console.

5. Yoke

This **yoke input devices** are designed specially to flight simulation game.

6. Motion Sensing

Motion sensing devices are capable to detect the real life motion, and produce the optimal result.

7. Light Gun

Shape look like as real gun, main motive to design this device to shooting games.

8. Rhythm Game Controllers

These types of **game controller devices** are made for music types game, for controlling the rhythm.

- **Audio Input/Output Device:**

With the help of **audio input devices**, user can send audio instructions to computer for different tasks such as processing, recording, and more. Many audio input devices work with speech recognition programs, because this software helps to translate spoken words into text document.

There are some **examples of audio input devices** such as

1. Microphone

This device is able to convert sound waves into electrical waves.

2. Midi keyboard

This device looks like as piano that is connect to computer via USB cable.

Audio Output Devices:

Some functionality are required for audio and video convert into hear able voice that our ears can hear these voice. This functionality may be special hardware and processing system, and this task can be fulfill by "**Audio output devices**".

Here few examples for **Audio output devices** are:

1. Sound Cards

This is external card which is attached with motherboard for yielding the audio output information.

2. Speakers

This is **output hardware device** that is used for the producing the sound.

3. Headphone

This device is wear on the head so its name is **headphone**, this device allow to user listen music without anyone.

4. Onboard Audio

This circuit embedded internal y in the motherboard that produce the output in the form of sound, after processed data.

Machine Hour Rate (Part-1)
Dr. Rajesh Agrawal
1.2K subscribers
11K views · 3 years ago

Meaning of Machine Hour Rate:
कारखाना उपकरणों के मशीनों पर अभिभाजन के आधार Basis of Apportionment of factory overhead) क्रिया, कर वर वर (rent, tax & fuel)

(Machine Hour Rate Method)
500 Factory overhead = ₹ 10,000
No. of Machine = 4
मशीन कारखाना उपकरण = $\frac{10000}{4} = 2500$
500 hours = 500 hours.
= $\frac{2500}{500} = ₹ 5$

Maths Lecture Video on Rolle's Theorem by Dr. Teenu Dubey.
Teenu Dubey
16K subscribers
19K views · 2 months ago

ROLLE'S THEOREM
(1) verify Rolle's theorem in the interval $[2, 4]$ for the function $f(x) = x^2 - 6x + 8$
 $f(x) = x^2 - 6x + 8$ and $a = 2, b = 4$
(2) $f(x)$ is a polynomial and each polynomial is continuous, hence $f(x)$ is continuous.
 $f'(x) = 2x - 6$ exists for each value of x in the open interval $(2, 4)$
 $f(2) = f(4) = 4^2 - 6 \cdot 4 + 8 = 16 - 24 + 8 = -8 + 8 = 0$
Have $f(a) = f(b)$

Electrochemical cell using a $Zn^{2+}/Zn(s)$ half-cell and a standard hydrogen electrode

Net reaction: $Zn(s) + 2H^+(aq) \rightarrow H_2(g) + Zn^{2+}(aq)$
